The Body[The Cell (A)|Tissues|General Features of the

their Latin Equivalents

abdomen, and pelvis.

111

Parts of the Body (A, B)

The Body

Skeleton/General Features of the Muscles/Anatomical Terms and

The body is divided into the main part of the body (trunk in the

broad sense) and the upper and lower limbs, or extremities. The trunk is divided into the head, the neck, and the torso (trunk in the narrow sense). The torso consists of the thorax,

The upper extremity is joined to the trunk by the shoulder girdle and the lower extremity by the pelvic girdle. The

which consists of the two hip (coxal) bones (3) and the sacrum (4), forms an integral part of the trunk.

shoulder girdle consists of the clavicles (1) and the scapulas (2), which lie on the trunk and move upon it. The pelvic girdle,
